PROJECTS

Online Shopping Products and Stocks management.

This will help an online business to better manage its stocks.

I have used constraints wherever needed and also used joints to have a better display of information.

Affiliate Marketing

(Promote+buy+admin_login)

<https://github.com/sunny-00/The-Hype>

My objective for the project is to help a business promote its products by using affiliate marketing.

I got to learn a lot of new concepts like Random number generator and how to implement CRUD operations in different ways,

Jewlery Shopping

In this project I have used JSP, Servlet, Html, CSS and MySql Database to store the data.

This project has helped me to better integrate Servlets to database and how to display data from database to JSP.

Car parking (SpotSaver)

<https://github.com/sunny-00/Parking-car-SpotSaver->

An application to find a perfect spot for you.

you can also add your own spot.

An admin can do CRUD operations as well by login in.

EDUCATION

Mumbai University,

BCOM (Bachelor of Commerce) 7.83gpa
